Modulhandbuch

Studiengang Master of Science Geomatics Engineering

Prüfungsordnung: 936-2013

Sommersemester 2018
Stand: 09. April 2018

Universität Stuttgart
Keplerstr. 7
70174 Stuttgart

Kontaktpersonen:

Studiendekan/in:	Univ.-Prof. Wolfgang Keller Geodätisches Institut E-Mail: wolfgang.keller@gis.uni-stuttgart.de
Studiengangsmanager/in:	Friedrich Wilhelm Krumm Geodätisches Institut Tel.: 0711 685 83388 E-Mail: friedrich-wilhelm.krumm@gis.uni-stuttgart.de
Prüfungsausschussvorsitzende/r:	Apl. Prof. Norbert Haala Institut für Photogrammetrie E-Mail: norbert.haala@ifp.uni-stuttgart.de
Stundenplanverantwortliche/r:	Ron Schlesinger Geodätisches Institut Tel.: 685-83473 E-Mail: r.schlesinger@gis.uni-stuttgart.de

Inhaltsverzeichnis

Qualifikationsziele

Advanced Mathematics, Geomatics Methodology and Geodesy (Advanced Mathematics, Signal Processing, Statistical Inference, Dynamic System Estimation, Map Projections and Geodetic Coordinate Systems, Physical Geodesy), Engineering Geodesy, Remote Data Acquisition and Representation of Geodata (Monitoring, Kinematic Measurement Systems, Remote Sensing, Airborne Data Acquisition, Geoinformatics, Thematic Cartography), Elective specialization (Multisensor Integration, Satellite Geodesy, Navigation, Geo-Telematics), two-week Integrated Fieldwork, Non-technical courses (Language and Culture, Information and Contract Law), Research-oriented thesis (6 months).

100 Pflichtmodule

Zugeordnete Module:

41210 Advanced Mathematics
41220 Geomatics Methodology
41230 Geodesy
41240 Remote Data Acquisition
41250 Representation of Geodata
41280 Integrated Project
48400 Engineering Geodesy
48440 Information and Contract Law

Modul: 41210 Advanced Mathematics

2. Modulkürzel:	062000011	5. Moduldauer:	Einsemestrig
3. Leistungspunkte:	6 LP	6. Turnus:	Wintersemester
4. SWS:	5	7. Sprache:	Englisch

8. Modulverantwortlicher:	Univ.-Prof. Dr. Wolfgang Keller
9. Dozenten:	Wolfgang Keller
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 1. Semester → Pflichtmodule
11. Empfohlene Voraussetzungen:	
12. Lernziele:	The module aims at establishing a common level of math skills for all students, smoothing out their individual entry levels. The module will provide skills to translate a problem in Geodesy into a mathematical model and to find a solution of the resulting mathematical problem.
13. Inhalt:	Ordinary and partial differential equations, Vector analysis, Integral theorems, Special functions, Potential theory
14. Literatur:	Kreyszig, E. (1999, 2006): Advanced Engineering Mathematics, Wiley und Sons
15. Lehrveranstaltungen und -formen:	• 412101 Lecture Advanced Mathematics • 412102 Lab Advanced Mathematics • 412103 Lecture Introduction to Mathematics (optional) • 412104 Lab Introduction to Mathematics (optional)
16. Abschätzung Arbeitsaufwand:	lectures 108 h (attendance 42h, self-study 66 h) exercises 72 h (attendance 28 h, self-study 44 h)
17. Prüfungsnummer/n und -name:	• 41211 Advanced Mathematics (PL), Schriftlich, 120 Min., Gewichtung: 1 • V Vorleistung (USL-V), Schriftlich oder Mündlich
18. Grundlage für ... :	
19. Medienform:	
20. Angeboten von:	Physikalische Geodäsie - Satellitengeodäsie

Modul: 41220 Geomatics Methodology

2. Modulkürzel:	062200301	5. Moduldauer:	Zweisemestrig
3. Leistungspunkte:	15 LP	6. Turnus:	Wintersemester
4. SWS:	9	7. Sprache:	Englisch

8. Modulverantwortlicher:	Dr.-Ing. Friedrich Wilhelm Krumm
9. Dozenten:	Friedrich Wilhelm Krumm Alfred Kleusberg Uwe Sörgel
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 1. Semester → Pflichtmodule
11. Empfohlene Voraussetzungen:	
12. Lernziele:	Statistical Inference The goal of this course is to impart knowledge on the most frequently applied adjustment models (model with observation equations, model with condition equations, mixed models) used in engineering disciplines and Geosciences, and their geometric interpretation. A minor part will treat hypothesis testing in linear models, internal and external reliability. Signal Processing The students will learn the methodologies of signal processing. Differentiation is made between deterministic signals and random signals. FIR and IIR filters are described by difference equations, filter design is solved in time and frequency domain. Markov processes are used to simulate random signals. The filter output is applied for many examples in signal and image processing. Dynamic System Estimation The students are familiar with the methodology for parameter estimation in systems, which can be described by solutions to ordinary differential equation systems. The concept of selected random processes for the error description is understood. The students are familiar with the Kalman filter estimation procedure
13. Inhalt:	Statistical Inference Basics on linear algebra, parameter adjustment, condition adjustment and mixed model adjustment, random variables, probability density functions, error propagation, hypothesis testing Signal Processing Definition of one- and two-dimensional signals. Fourier Series and Fourier Transforms, Cosine transforms, theory of Wavelets. Linear systems, FIR and IIR filters. Linear phase and zero-phased systems. Filter design for deterministic and random signals. Matched and Wiener filters, convolutions in 1D and 2D, Fast convolutions. Explanations of ad hoc operators in signal and image processing and its comparison of designed systems. Dynamic System Estimation Review of Least Squares Estimation, Sequential Least Squares Estimation, Ordinary Differential Equations, numerical integration methods, linear dynamic systems, state space descriptions, random processes, state augmentation, derivation of Kalman Filter equations, Kalman smoother, comparison of Kalman filter to sequential Least Squares Estimation

15. Lehrveranstaltungen und -formen:	• 412201 Lecture Statistical Inference • 412205 Lecture Signal Processing • 412204 Lab Dynamic System Estimation • 412202 Lab Statistical Inference • 412206 Lab Signal Processing • 412203 Lecture Dynamic System Estimation
16. Abschätzung Arbeitsaufwand:	Statistical Inference 150 h (contact hours lectures and labs 42 h, self study 108 h) Signal Processing 150 h (contact hours lectures and labs 42 h, self study 108 h) Dynamic System Estimation 150 h (contact hours lectures and labs 42 h, self study 108 h) Total 450 h
17. Prüfungsnummer/n und -name:	• 41221 Statistical Inference and Signal Processing (PL), Schriftlich, 120 Min., Gewichtung: 1 • V Vorleistung (USL-V), Schriftlich oder Mündlich • 41222 Dynamic System Estimation (PL), Schriftlich, 60 Min., Gewichtung: 1
18. Grundlage für ... :	
19. Medienform:	Videocasts, Beamer, Board, Overhead projection, Matlab
20. Angeboten von:	Höhere Geodäsie

Modul: 41230 Geodesy

2. Modulkürzel:	062000401	5. Moduldauer:	Zweisemestrig
3. Leistungspunkte:	9 LP	6. Turnus:	Wintersemester
4. SWS:	6	7. Sprache:	Englisch

8. Modulverantwortlicher:	Univ.-Prof. Dr.-Ing. Nicolaas Sneeuw
9. Dozenten:	Nicolaas Sneeuw Friedrich Wilhelm Krumm
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 1. Semester → Pflichtmodule
11. Empfohlene Voraussetzungen:	Advanced Mathematics
12. Lernziele:	**Map Projections and Geodetic Coordinate Systems** Students are enabled to interpret maps and to represent the Earth using different kinds of map projections. They are capable to investigate, to evaluate and to visualize occurring distortions. They know how to deal with different kinds of reference and coordinate systems, and to perform transformations between them. **Physical Geodesy** Students are able to judge the fundamental role of the gravity field and the geoid in all disciplines of geomatics engineering. They have the skills to select the appropriate methodological tools from physical geodesy for actual problems and projects. They understand the pros and cons of different height systems.
13. Inhalt:	**Map Projections and Geodetic Coordinate Systems** Basics on differential geometry of surfaces, geometry of sphere and ellipsoid-of-revolution, spherical map projections, optimal map projections, legal map projections (Gauß-Krüger/UTM), deformations and deformation measures, 2D and 3D coordinate systems and datum transformation models **Physical Geodesy** Elements of potential theory, gravitation and gravity, measurement principles of gravimetry, gravity networks, approaches to solving the Laplace equation, special functions of physical geodesy, geoid determination, height systems
14. Literatur:	**Physical Geodesy** • Sneeuw, Physical Geodesy, lecture notes, University of Stuttgart • Torge, W. (2001) Geodesy. 15. Lehrveranstaltungen und -formen:	• 412301 Lecture Map Projections and Geodetic Coordinate Systems • 412303 Lecture Physical Geodesy • 412302 Lab Excercises Map Projections and Geodetic Coordinate Systems • 412304 Lab Excercises Physical Geodesy
16. Abschätzung Arbeitsaufwand:	Map Projections and Geodetic Coordinate Systems 135 h (contact hours lectures and labs 42 h, self study 93 h) Physical Geodesy 135 h (contact hours lectures and labs 42 h, self study 93 h) Total 270 h
17. Prüfungsnummer/n und -name:	• 41231 Geodesy (PL), Schriftlich, 120 Min., Gewichtung: 1 • V Vorleistung (USL-V), Schriftlich
18. Grundlage für ... :	
19. Medienform:	blackboard, projector, Matlab
20. Angeboten von:	Höhere Geodäsie

Modul: 41240 Remote Data Acquisition

2. Modulkürzel:	062100310	5. Moduldauer:	Zweisemestrig
3. Leistungspunkte:	9 LP	6. Turnus:	Sommersemester
4. SWS:	6	7. Sprache:	Englisch

8. Modulverantwortlicher:	Univ.-Prof. Dr.-Ing. Uwe Sörgel
9. Dozenten:	Uwe Sörgel
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 2. Semester → Pflichtmodule
11. Empfohlene Voraussetzungen:	
12. Lernziele:	**Remote Sensing** Students understand the principles of Remote Sensing of the surface of the earth from satellites in the visible light spectrum, the infrared spectrum and the spectrum of Radar signals. This includes the understanding of the complete radiation path from the source of radiation to the radiation detecting sensors, and the data communication to earth receiving stations. **Airborne Data Acquisition** Students understand the principles of direct georeferencing by GPS/IMU integration and in-situ camera calibration using extended bundle block adjustments. The photogrammetric processing pipeline consisting of image orientation, image matching and true orthophoto generation is a major subject. Airborne full waveform LiDAR and airborne RADAR complete the student's knowledge. Follow-up products such as 3D city and landscape models are also presented.
13. Inhalt:	**Remote Sensing (RS)** Introduction including the history of RS and an overview of modern RS systems, orbits of RS satellites, sources of electromagnetic (EM) radiation, propagation of EM radiation, interaction of EM radiation with matter, detection and measurement of EM radiation, analog to digital conversion, data transmission and storage **Airborne Data Acquisition** Principles of airborne kinematic GPS, PPP solutions, basics of IMU, GPS/IMU integration, bundle block adjustment, camera calibration using additional parameters, Image matching: from 2D correlation, least-squares and feature-based matching to semi-global matching. Automatic aerial triangulation and generation of dense surface models, orthophoto generation, airborne LiDAR and its processing (full wave form analysis), RADAR data collection, integration of RADAR and optical imagery.

15. Lehrveranstaltungen und -formen:	• 412403 Lecture Airborne Data Acquisition • 412401 Lecture Remote Sensing • 412404 Lab Airborne Data Acquisition • 412402 Lab Remote Sensing
16. Abschätzung Arbeitsaufwand:	Remote Sensing 135 h (contact hours lectures and labs 42 h, self study 93 h) Airborne Data Acquisition 135 h (contact hours lectures and labs 42 h, self study 93 h) Total 270 h
17. Prüfungsnummer/n und -name:	• 41241 Remote Data Acquisition (PL), Schriftlich, 120 Min., Gewichtung: 1 • V Vorleistung (USL-V), Schriftlich oder Mündlich
18. Grundlage für ... :	
19. Medienform:	Videocasts, Beamer, White Board, MatLab, IGI FlightSimulator
20. Angeboten von:	Photogrammetrie, Fernerkundung und Geoinformatik

Modul: 41250 Representation of Geodata

2. Modulkürzel:	062200302	5. Moduldauer:	Einsemestrig
3. Leistungspunkte:	9 LP	6. Turnus:	Wintersemester
4. SWS:	6	7. Sprache:	Englisch

8. Modulverantwortlicher:	Bernhard Minke
9. Dozenten:	Volker Walter Martin Metzner
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 3. Semester → Pflichtmodule
11. Empfohlene Voraussetzungen:	
12. Lernziele:	Geoinformatics The students know the technologies for the input, management, analysis andpresentationof spatial data. They are able to use different standard software tools. They are able to collect, model and exchange spatial data on web-platforms. They know the necessity and the advantages of storing spatial data with database management systems. Thematic Cartography The students have competence in the basics of cartography and the creation and optimal presentation of thematic data. They will be enabled to perform the appropriate geometric, topologic and thematic modeling and presentation.
13. Inhalt:	Geoinformatics Data Sources, Data Collection, Geometrical/Topological/ Thematic Data Modelling, Data Structures,Virtual Globes, Web 2.0 Technologies, Spatial Data Infrastructures, Web-APIs, Web-Services,GeoDBMS, Thematic Cartography Analysis for information systems requirements (focus on thematic maps), Scientific cartography, cognitive maps, structure of the geo-data market, Techniques of homogenizing data sets (matching and merging), Map design, animated maps, thematic maps for individual and public transport

15. Lehrveranstaltungen und -formen:	• 412501 Lecture Geoinformatics • 412503 Lecture Thematic Cartography • 412502 Lab Geoinformatics • 412504 Lab Thematic Cartography
16. Abschätzung Arbeitsaufwand:	Geoinformatics 180 h (contact hours lectures and labs 56 h, self study 124 h) Thematic Cartography, lecture: 45 h (attendance 14 h, self study 31 h) Thematic Cartography, laboratory: 45 h (attendance 14 h, self study 31 h) Total: 270 h (attendance 78 h, self study 192 h)
17. Prüfungsnummer/n und -name:	• 41251 Representation of Geodata (PL), Schriftlich, 120 Min., Gewichtung: 1 • V Vorleistung (USL-V), Schriftlich
18. Grundlage für ... :	
19. Medienform:	Videocast, Blackboard, laptop + LCD projector, White Board, laboratory and calculation exercises
20. Angeboten von:	Photogrammetrie, Fernerkundung und Geoinformatik

Modul: 41280 Integrated Project

2. Modulkürzel:	062300032	5. Moduldauer:	Einsemestrig
3. Leistungspunkte:	6 LP	6. Turnus:	Sommersemester
4. SWS:	0	7. Sprache:	Englisch

8. Modulverantwortlicher:	Univ.-Prof. Dr.-Ing. Volker Schwieger
9. Dozenten:	Wolfgang Keller Nicolaas Sneeuw Volker Schwieger Uwe Sörgel Alfred Kleusberg Norbert Haala
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 2. Semester → Pflichtmodule
11. Empfohlene Voraussetzungen:	
12. Lernziele:	The students are able to apply the knowledge of the modules of semester 1 and 2 project-related on variable topics. Additionally they know about project management, team work, scientific reporting and presentation techniques.
13. Inhalt:	Variable topics are treated in projects, e.g. "geoid determination and "stake out of a tunnel . The student work for ten days on the project that is structured by several working packages. The planning, measurement, evaluation and analysis are realized in small teams. The students take care about the project management in different organisational levels. The academic staff act as mentors and not as teachers. For the preparation of the measurement campaign each student has to prepare one working package including a presentation. After the measurement campaign a joint scientific report has to be realised and each student has to present his working package.
14. Literatur:	Documents/teaching materials from the modules of the 1st and 2nd semester
15. Lehrveranstaltungen und -formen:	• 412801 Integrated Project
16. Abschätzung Arbeitsaufwand:	Integrated Project, 10 days project: 90 h (attendance time 90 h, self study 0 h) Integrated Project, presentation and final report: 90 h (attendance 10 h, self study 80 h) Total: 180 h (attendance 100 h, self study 80 h)
17. Prüfungsnummer/n und -name:	41281 Integrated Project (USL), Sonstige, Gewichtung: 1
18. Grundlage für ... :	
19. Medienform:	laptop + LCD projector, field project
20. Angeboten von:	Ingenieurgeodäsie und Geodätische Messtechnik

Modul: 48400 Engineering Geodesy

2. Modulkürzel:	062300031	5. Moduldauer:	Zweisemestrig
3. Leistungspunkte:	9 LP	6. Turnus:	Wintersemester
4. SWS:	6	7. Sprache:	Englisch

8. Modulverantwortlicher:	Univ.-Prof. Dr.-Ing. Volker Schwieger
9. Dozenten:	Otto Lerke Volker Schwieger Jinyue Wang
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 1. Semester → Pflichtmodule
11. Empfohlene Voraussetzungen:	
12. Lernziele:	The students are able to understand the principle of monitoring sensors, apply them for monitoring tasks and realize deformation analysis in the congruency model. Additionally they know all the details about positioning, filtering and controlling within kinematic measurement systems with a special focus on total stations. Knowledge about the graphical programming software Labview is available.
13. Inhalt:	Monitoring networks and point determination, Inclination measurements, Hydrostatical leveling, Alignment, plumbing methods, additional sensors, Monitoring analysis using the congruency model: two- and multi-epoch , comparison, global test, sensitivity test for localization of deformations, Graphical programming: introduction and data acquisition, Recapitulation of tachymeter techniques and measurements, Robot total stations, GNSS, other Kinematic measurement systems, Positioning for moving objects , Vehicle models, Prediction and filtering, e.g. Kalman filter, Basics of control theory, Integration of kinematic measurements into control circles, Construction machine guidance, Project at construction machine simulator of IIGS
14. Literatur:	Schofield/Breach (2007): Engineering Surveying Sixth Edition, Oxford, Elsevier Gelb, G. (Ed.) (1974), Applied optimal estimation, M.I.T. Press, Cambridge, Mass. 20. Angeboten von:	Ingenieurgeodäsie und Geodätische Messtechnik

Modul: 48440 Information and Contract Law

2. Modulkürzel:	62000099	5. Moduldauer:	Einsemestrig
3. Leistungspunkte:	3 LP	6. Turnus:	Wintersemester
4. SWS:	2	7. Sprache:	Englisch

8. Modulverantwortlicher:	Horst Speichert
9. Dozenten:	Horst Speichert
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 3. Semester → Pflichtmodule
11. Empfohlene Voraussetzungen:	
12. Lernziele:	Introduction to basics of contract law, international contract and information law as well as Internet and data protection law. Students are made familiar with methods for lawful contracts and contracts checking, especially with regard to future management positions
13. Inhalt:	Introduction: Objectives and mechanism of law, The legal system (overview), The system of national law, The European system of law, International law Contract law: General remarks, Requirements for a contract in general, Terms of contract, Irregularities in the performance of the contract, Disputes, arbitration, law-suits Types of contract: act of sale, UN Convention on Contracts for the International Sale of Goods (CISG), contract for services, contract of work and labor The law on torts (liability): General remarks, Tort liability based on fault, Product liability, Warranty, Compensation Selected fields of law (overview): Labor law, The law of business associations, Company law, Commercial law, Competition law, advertising, Copyright, patent, brands and related rights E-commerce and Internet: Web publishing, Liability, Multimedia, European legislation, IT-Security law (overview),Data protection, Privacy policy, European legislation

20. Angeboten von:	Geodätisches Institut

200 Wahlpflichtmodule

Zugeordnete Module:

48420	Satellite Geodesy
48430	Navigation
77790	Computer Vision and Pattern Recognition
77800	Multisensor Integration in Geodesy and Transport

Modul: 48420 Satellite Geodesy

2. Modulkürzel:	62000092	5. Moduldauer:	Einsemestrig
3. Leistungspunkte:	9 LP	6. Turnus:	Wintersemester
4. SWS:	6	7. Sprache:	Englisch

8. Modulverantwortlicher:	Univ.-Prof. Dr. Wolfgang Keller
9. Dozenten:	Wolfgang Keller
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 3. Semester → Wahlpflichtmodule
11. Empfohlene Voraussetzungen:	Advanced Mathematics
12. Lernziele:	The module aims at an understanding of the interplay between space-observation techniques, the related reference systems and the error sources degrading the observations. The students will learn to apply and assess space techniques for position acquisition with a sound knowledge of the available techniques of error mitigation.
13. Inhalt:	Reference systems and transformation rules between them, Signal propagation, Orbital mechanics, Satellite Laser ranging, VLBI, Satellite altimetry, GNSS positioning
14. Literatur:	Seeber, G. (2004) Satellite Geodesy, de Gruyter Leick, A.(2004) Satellite Surveying, Wiley und Sons
15. Lehrveranstaltungen und -formen:	• 484201 Lecture Foundations of Satellite Geodesy • 484202 Laboratory Foundations of Satellite Geodesy • 484203 Lecture Satellite Geodesy Observation Techniques • 484204 Laboratory Satellite Geodesy Observation Techniques
16. Abschätzung Arbeitsaufwand:	lectures 140 h (attendance 56h, self-study 84 h) exercises 130 h (attendance 42 h, self-study 88 h)
17. Prüfungsnummer/n und -name:	• 48421 Satellite Geodesy (PL), Schriftlich, 120 Min., Gewichtung: 1 • V Vorleistung (USL-V), Schriftlich
18. Grundlage für ... :	
19. Medienform:	
20. Angeboten von:	Physikalische Geodäsie - Satellitengeodäsie

Modul: 48430 Navigation

2. Modulkürzel:	62100320	5. Moduldauer:	Einsemestrig
3. Leistungspunkte:	9 LP	6. Turnus:	Wintersemester
4. SWS:	6	7. Sprache:	Englisch

8. Modulverantwortlicher:	Univ.-Prof. Dr.-Ing. Alfred Kleusberg
9. Dozenten:	Alfred Kleusberg
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, → Zusatzmodule M.Sc. Geomatics Engineering, PO 936-2013, 3. Semester → Wahlpflichtmodule
11. Empfohlene Voraussetzungen:	Advanced Mathematics, Dynamic System Estimation
12. Lernziele:	**Satellite Navigation** Students have a complete understanding of all aspects of satellite navigation with modern Global Navigation Satellite Systems (GNSS) like GPS or Glonass. This understanding includes the design of orbital constellation and the description of orbits. The process from signal generation, modulation and transmission over signal propagation in the atmosphere including refraction effects up to the signal demodulation and measurement in the receiver is understood. Based on this the students know the GNSS position accuracy limitations and the potential for error corrections by DGNSS. **Integrated Positioning and Navigation** Students have a basic understanding of the mathematical and physical background of Strap-Down Inertial Navigation Systems. Based on this they understand the error behavior of INS with different types of inertial sensors, and the need to integrate such systems with external measurements, such as GNSS or DGNSS positions.
13. Inhalt:	**Satellite Navigation** Definition and realization of global coordinate systems for GNSS, satellite orbits and orbit parameters, GNSS signal generation and modulation, signal propagation, ionospheric and tropospheric refraction, signal reception and pseudorange measurements, modeling of pseudorange measurements, position determination, position error assessment, DGNSS **Integrated Positioning and Navigation** Coordinate systems (inertial, ECEF, local level, body, platform), parameterisation of transformations and rotations, rotational velocity, Strap-Down-Navigator differential equations, inertial sensors, integration of differential equations, error control, integration with externally provided positions.

Modul: 77790 Computer Vision and Pattern Recognition

2. Modulkürzel:	-	5. Moduldauer:	Einsemestrig
3. Leistungspunkte:	9 LP	6. Turnus:	Wintersemester
4. SWS:	4	7. Sprache:	Englisch

8. Modulverantwortlicher:	Univ.-Prof. Dr.-Ing. Uwe Sörgel
9. Dozenten:	Uwe Sörgel
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 3. Semester → Wahlpflichtmodule
11. Empfohlene Voraussetzungen:	
12. Lernziele:	Within this module, the students will understand the automated methods and technologies of computer vision and pattern recognition. This comprises on the one hand image matching and orientation by means of approaches like structure from motion and 3D reconstruction by dense image matching. On the other hand, students will be able to scan large data amounts to identify certain classes of interest by means of feature selection and clustering.
13. Inhalt:	Lecture Computer Vision Automatic image matching by intensity and feature based methods, automatic image orientation by Structure.from-Motion, image based 3D surface reconstruction using dense multi-view stereo, image segmentation Lecture Pattern Recognition Feature space, different types of features, curse of dimensionality, Model based and statistical methods, supervised and unsupervised classification, Classification methods: Minimum distance, maximum likelihood, Bayes, decision tree, random forest, support vector machine, neural networks, and random fields, confusion matrix, overall accuracy, producer's and user's accuracy

400 Deutschkurse

Zugeordnete Module: 48450 German as a Foreign Language

Modul: 48450 German as a Foreign Language

2. Modulkürzel:	-	5. Moduldauer:	Einsemestrig
3. Leistungspunkte:	6 LP	6. Turnus:	Wintersemester
4. SWS:	2	7. Sprache:	Deutsch

8. Modulverantwortlicher:	Dr. Karin Herrmann
9. Dozenten:	
10. Zuordnung zum Curriculum in diesem Studiengang:	M.Sc. Geomatics Engineering, PO 936-2013, 1. Semester → Deutschkurse
11. Empfohlene Voraussetzungen:	
12. Lernziele:	Students are able to converse about everyday situations in their studies and home, read and understand simple texts, have a command of basic grammar structures, and write about life and culture in the German speaking countries.
13. Inhalt:	The course aims to develop the four communication skills listening, speaking, reading, and writing, with an increased emphasis on conversational German. Students are exposed to everyday and professional situations. Students learn frequently used expressions related to areas of most immediate relevance (e.-g. very basic personal and family information, shopping, local geography, employment)
14. Literatur:	text book according to german level
15. Lehrveranstaltungen und -formen:	• 484501 Intensive German Course
16. Abschätzung Arbeitsaufwand:	attendance 130 h (attendance is mandatory) self study 60 h (since most exercises and labs take place during class, self study requires less time)
17. Prüfungsnummer/n und -name:	48451 German as a Foreign Language (USL), Schriftlich, Gewichtung: 1
18. Grundlage für ... :	
19. Medienform:	
20. Angeboten von:	II Internationales

Modul: 80920 Masterthesis GEOENGINE
